

Modular System

Integrated Global Alignment (iGA) is a platform comprised of procedurally based technologies, designed to enhance clinical and economic outcomes by increasing the predictability of achieving global alignment in all spinal procedures. Integration across the surgical workflow allows the surgeon to confidently and reproducibly:

- Calculate alignment parameters with preoperative planning tools.
- **Correct** the anterior and posterior column with comprehensive procedural solutions from NuVasive with the industry's only real-time intraoperative assessment.
- Confirm the restoration and preservation of global alignment postoperatively.

EVOLVING POSTERIOR FIXATION TECHNOLOGY WITHIN THE RELINE PORTFOLIO

The Reline Modular system was designed to offer unimpeded access with versatile implant options in TLIF and PLIF procedures. Intraoperative tulip assembly provides reliable screw performance, similar to a preassembled polyaxial screw.¹

UNIMPEDED ACCESS

Improved Visualization Low-profile screw shanks designed to optimize visibility of anatomical landmarks and disc space

Expanded Decortication Optimized access to posterior lateral gutters prior to screw assembly for robust decortication

Superior Distraction Allows for ipsilateral distraction, maximizing access to disc space during discectomy and interbody graft placement

VERSATILE IMPLANTS

- Standard and reduction tulip options
- Efficient, low-profile tulip design: Accepts 5.0, 5.5, 6.0mm rods in Ti and CoCr

RELIABLE PERFORMANCE

- Benefits of modular screws with the strength of assembled polyaxial screws
 - Proper assembly of instrumentation confirmed with visual and tactile feedback

Tulip Pull-off Strength (N)

Reline Modular screws demonstrated superior tulip pull-off strength in tests with competitive preassembled polyaxial screws.
