HIGHRIDGE

The Tether is approved as a Humanitarian Device for patients with idiopathic scoliosis with a Cobb angle of 30-65 degrees. Patients should have failed bracing and/or be intolerant to brace wear. There is probable benefit of the device, but its efficacy is still unproven. Post-operative risks include overcorrection of the instrumented curve, cord breakage, and bone screw migration. Full contraindication and risk information can be found at myscoliosis.com. Unless otherwise indicated, as referenced herein, all trademarks and intellectual property rights are the property of Highridge Medical, LLC or an affiliate; and all products are manufactured by one or more of the spinal subsidiaries of Highridge Medical, LLC and marketed and distributed by its authorized marketing partners.
